

GARVIT KHURANA

AI Product Lead & Engineer

+1 (646) 763-3302 | garvit.khurana@columbia.edu | [linkedin.com/in/garvitkhurana](https://www.linkedin.com/in/garvitkhurana) | github.com/garvitkhurana

SUMMARY

AI Product Lead & Engineer on BlackRock's AI Accelerator. Own roadmap and delivery for LLM/RAG tools on live capital-markets workflows, including a security-creation system that cut time-to-market for new public bonds ~40% and extended into private credit. Work the full loop: model (RAG, prompting, extraction), infra (APIs, data pipelines, Azure), and finance-grade evals/tracing. Builds personal AI systems (agents, RAG, guardrails, voice) outside of work, shipping something new most weeks.

SKILLS

Model: OpenAI / Claude · LangChain · RAG · ChromaDB · Prompting · Structured outputs · Tool calling · PyTorch · MLX

Infra: Python · FastAPI · SQL · PySpark · Azure / AWS · Databricks · ETL

Evals / Tracing: OpenTelemetry · Azure Monitor · LangSmith · custom golden-set field checks

Product: 0→1 ownership · Roadmap · Client-facing delivery · GTM & adoption · Stakeholder collaboration

Certifications: Anthropic: Claude, Stanford: Machine Learning, Databricks: LLMs: Application through Production

Research: Four Machine Learning publications in international journals

EXPERIENCE

Product Lead / Engineer II, AI Accelerator | BlackRock Inc.

Sep 2024 – Present

- Owned 0→1 for an internal LLM/RAG workflow that turns long bond prospectuses into structured security records, reducing manual retyping and cutting time-to-market for new public bonds ~40%.
- Extended into private credit (messier docs): tightened model → infra → evals/tracing, field validation and traced extraction runs so bad fields fail loudly before they reach a client workflow.
- Work directly with client and relationship-management teams on adoption; partner with data science on SQL, telemetry, and Azure pipelines so prioritization tracks what breaks in use.
- Run discovery through launch: research, feedback, epics/stories, and Jira prioritization against business and AI goals.

Private Markets Associate | BlackRock Inc.

Jun 2022 – Aug 2024

- PE, funds, infrastructure, and private credit teams were each catching data errors their own way, late. Launched the Private Governance Platform to catch them at the source: ~80% manual intervention, +20% reporting accuracy into Aladdin.
- Built NLP issuer-search tooling - PM teams were losing time hunting the same issuer across systems that didn't talk to each other; now it's one search.
- Partnered with engineering to scale platform adoption across asset classes without scaling the error rate.

Product Management & Data Science Intern | APG Asset Management US Inc.

Sep 2021 – May 2022

- Used NLP/ML to analyze hedge fund 13F filings, surfacing alpha opportunities and cutting portfolio risk exposure 30%.
- Enabled ESG factor integration workflows on Azure Databricks and delivered real-time risk dashboards for investment decisions.

Growth Product Intern | PadSquad LLC, AdTech Startup

Jun 2021 – Sep 2021

- Automated multi-vendor reporting tooling, cut reporting time 50%, grew client acquisition 20%.

Big Data Analytics Engineer Intern | Hewlett Packard Enterprise, Singapore

Jun 2019 – Jul 2019

- Led a CNN-based air-gesture recognition model for assistive technologies, achieving 97.9% accuracy.

SELECTED PROJECTS

- Altline** - building now - agentic back office for alternative assets

The model reads, a deterministic engine verifies: LLM extracts terms from the credit agreement, then a rules engine recomputes the borrowing-notice and rate-set numbers instead of trusting what an administrative agent sends. LLM extraction, guardrails, FastAPI.

- agent-relay** | <https://github.com/garvitkhurana/agent-relay>

Small utility that hands an in-progress coding task off to the next available agent (Claude, Codex, Cursor) when one hits a rate limit or quota, uses git worktrees to carry over the actual file state instead of restarting the prompt from scratch.

- voice-clone** | <https://github.com/garvitkhurana/voice-clone>

Local voice-clone TTS on Mac (Qwen3 / MLX) with a simple FastAPI UI - personal learning project on on-device inference.

EDUCATION

Columbia Business School & Columbia Engineering, New York - M.S. in Business Analytics, GPA: 3.73/4.0

May 2022

Vellore Institute of Technology, Tamil Nadu - B. Tech in Computer Science and Engineering, GPA: 9.33/10.0

Jul 2020

National University of Singapore, Singapore - Certification in Data Science and Big Data, Grade: A

Jul 2019
