

GARVIT KHURANA

AI Product Lead | Senior / Founding PM, AI & Agents

+1 (646) 763-3302 | garvit.khurana@columbia.edu | [linkedin.com/in/garvitkhurana](https://www.linkedin.com/in/garvitkhurana) | github.com/garvitkhurana

SKILLS

Technical: Python, SQL, LangChain, RAG / Agentic Systems, LLMs, PyTorch, PySpark, NLP, AWS, Azure, ETL

Product: 0-to-1 Ownership, Roadmap Prioritization, GTM & Adoption, Stakeholder Collaboration, A/B Testing

Certifications: Anthropic- Claude Stanford- Machine Learning, Databricks- LLMs: Application through Production

Research: Four Machine Learning research publications in international journals

EXPERIENCE

Product Lead / Engineer II, AI Accelerator | BlackRock Inc.

Sep 2024 – Present

- Ops were manually retyping bond terms out of 100+ page prospectuses for every issuance - slow, error-prone. Own the RAG platform that reads the prospectus and builds the security master directly, cutting time-to-market ~40%.
- Scaled the same system into private credit, where deals aren't standardized and edge cases break naive extraction - redesigned the extraction and review workflow to stay usable past the happy path.
- Took a prospectus-scraper tool 0-to-1 with OpenAI-powered extraction, then layered on an anomaly-detection pipeline that cut manual review effort 25% and false positives 95%; built an observability framework (Azure Blob + Cassandra) that cut incident resolution time 30%.
- Partner with data science on SQL, telemetry, and Azure pipelines - roadmap bets come from where the system fails in production, not a slide deck. Own GTM with relationship management, driving adoption across client segments.

Private Markets Associate | BlackRock Inc.

Jun 2022 – Aug 2024

- PE, funds, infrastructure, and private credit teams were each catching data errors their own way, late. Launched the Private Governance Platform to catch them at the source: -80% manual intervention, +20% reporting accuracy into Aladdin dashboards.
- Built NLP issuer-search tooling: PM teams were losing time hunting the same issuer across systems that didn't talk to each other; now it's one search.
- Partnered with engineering to scale platform adoption across asset classes without scaling the error rate.

Product Management & Data Science Intern | APG Asset Management US Inc.

Sep 2021 – May 2022

- Used NLP/ML to analyze hedge fund 13F filings, surfacing alpha opportunities and cutting portfolio risk exposure 30%.
- Enabled ESG factor integration workflows on Azure Databricks and delivered real-time risk dashboards for investment decisions.

Growth Product Intern | PadSquad LLC, AdTech Startup

Jun 2021 – Sep 2021

- Automated multi-vendor reporting tooling - cut reporting time 50%, grew client acquisition 20%.

Big Data Analytics Engineer Intern | Hewlett Packard Enterprise, Singapore

Jun 2019 – Jul 2019

- Led a CNN-based air-gesture recognition model for assistive technologies, achieving 97.9% accuracy.

PROJECTS - BUILDING OUTSIDE THE DAY JOB

Altline - Building now - agentic back office for alternative assets

- Recomputes private-credit borrowing-notice and rate-set numbers straight from the credit agreement, instead of trusting the number an administrative agent sends. LLM extraction, FastAPI.

13F-Analyzer

- SEC Form 13F scraper with CUSIP extraction/matching via OpenFIGI and market-data enrichment for tracking institutional holdings. Python.

GARCH Volatility Model

- Volatility forecasting for personal portfolio management with a full CI/CD pipeline, data cleaning through deployment, at 96% accuracy.

Voice Clone

- Local voice-cloning TTS on macOS - Qwen3 via MLX, FastAPI server, streaming browser UI.

EDUCATION

Columbia Business School & Columbia Engineering - M.S. in Business Analytics, GPA 3.73/4.0

May 2022

Vellore Institute of Technology - B. Tech in Computer Science, GPA 9.33/10.0

Jul 2020

National University of Singapore - Certification in Data Science and Big Data, Grade A

Jul 2019
